

Extract Exe Files

1. Launch Command Prompt
2. Go to the directory where you saved or downloaded the exe file
for example `c:\downloads\intel\IATA85ENU.exe`
3. Type the following command at the dos prompt once you're in that subdirectory
`IATA85ENU.exe /A /P C:\IATA`

The files will be extracted to `C:\IATA`
(or any folder that you point in the command above)

The command is `sourcefile.exe /a /p c:\targetdirectory`
